## Computer Networks

Instructors: Chittaranjan Hota ([hota@bits-hyderabad.ac.in](mailto:hota@bits-hyderabad.ac.in)) I/C  
Abhishek Thakur

### Scope and Objectives:

This course will give you a breakdown of the applications, communications protocols, and network services that make a computer network work. We will closely follow the top down approach to computer networking, which will enable you to first understand the most visible part i.e. the applications, and then seeing, progressively, how each layer is supported by the next layer down. Most of the time our example network will be the Internet. Also, a chapter on wireless and mobile networks will be covered as currently users access the Internet from offices, from homes, while on move, and from public places wirelessly. We also plan to have several programming assignments to provide practical skills and insights using Ethereal, a network protocol analyzer tool, NetSim a Network simulator, and Unix Socket API.
